Select the desired settina for each field and whether the field can be edited bv the user at the control panel. If anv selections reauire users to sian in. set the base anolication to reauire
7. Enter SMTP server name, port number and check enable SMTP SSL/TLS if needed and click next.

## 8. Select if it requires authentication.

9. If this is required select always use these credentials and enter a username and password. Then click next.

10. Most of the time these will be unchecked.

Outgoing Email Servers (SMTP)

## Server Usage

Choose which functions will send email through this server. Configuring an SMTP server is one of multiple steps to enable these functions. Use this server for:
Email: Send scanned documents and job status notifications.Fax: send faxes when the fax send method is set to Internet Fax$\square$ Automated Emails: Device alerts, scheduled reports, and archived faxes are examples of automated emails sent by this device.
$\square$ AutoSend: send device information to HP or other recipients
11. Enter an email address and click on test. This may take 2 minutes.

## Outgoing Email Servers (SMTP)

Summary and Test
SMTP address is smtp.gmail.com
SMTP SSL protocol is enabled
Validating certificates for outgoing server connections is False

- Server uses port 587
- Server requires authentication
- Server usage: Send Email

Send Test Email:
$\square$ Test

12. If you get the successfully sent message SMTP will be setup. If the job log is showing that the jobs are successful but the emails aren't arriving then check the junk or spam folder.

Outgoing Email Servers (SMTP)
